

dns

daemontools

<http://cr.yp.to/daemontools/faq/create.html>

```
restart:    svc -t /service/tinydns
up:        svc -u /service/tinydns
down:     svc -d /service/tinydns
```

delete service:

```
cd /service/test
rm /service/test
svc -dx . log
```

LOG:

lze nastavit parametry jak veliky muze byt soubor a kolik souboru zpatky udrzovat:

```
exec setuidgid user multilog t s1000000 n20 /var/log/program 2>&1
```

restart multilogu pro konkretniho daemona:

```
ps -ef | grep multilog
```

prvni cislo je pid procesu, takze

```
kill [pid]
```

druhe cislo je pid supervise logu, mozno zabit pokud napr. zustane viset po odinstalovani sluzby
